

AMENDMENTS TO THE CLAIMS

1-21. (Cancelled)

22. (Currently Amended) A manufacturing method for an optical data recording medium, said method comprising:

preparing a first substrate;

applying a first radiation curable resin to a side of the first substrate;

~~coating the first substrate with a radiation curable resin;~~

curing a first part of the first radiation curable resin such that a second part of the first radiation curable resin is uncured; in part;

preparing a second substrate having a groove or lands and pits on one side;

~~disposing~~ applying a second radiation curable resin material to the side of the second substrate having the groove or the lands and pits; ~~and~~

curing a first part of the second radiation curable resin such that a second part of the second radiation curable resin is uncured;

laminating the first radiation curable resin of the first substrate and the second radiation curable resin material of the second substrate together after both of the first and second the radiation curable resin is resins are partially cured in said curing in of the first part of the first radiation curable resin and said curing of the first part of the second radiation curable resin;

curing the uncured second part of the first radiation curable resin and the uncured second part of the second radiation curable resin after the first radiation curable resin of the first substrate and the second radiation curable resin of the second substrate are laminated together in said laminating of the first radiation curable resin of the first substrate and the second radiation curable resin second substrate together; and

removing the first substrate after the uncured second part of the first radiation curable resin and the uncured second part of the second radiation curable resin are cured in said curing of the uncured second part of the first radiation curable resin and the uncured second part of the second radiation curable resin.

23. (Currently amended) A manufacturing method for an optical data recording medium according to claim 22, wherein said curing ~~in of the first part of the first~~ radiation curable resin ~~coating the first substrate~~ includes changing the cured state of the first radiation curable resin inside and outside a first specified radius of the first substrate.

24-26. (Cancelled)

27. (Currently amended) A manufacturing method for an optical data recording medium according to claim ~~26~~22, wherein a material used for the first radiation curable resin is different from the same radiation curable resin coated to the first substrate is used as a material used for the second radiation curable resin.

28-31. (Cancelled)

32. (Currently amended) A manufacturing method for an optical data recording medium according to claim 22, wherein at least one of the first and second substrates is substantially transparent to radiation for curing at least one of the first and second radiation curable resin resins.

33-35. (Cancelled)

36. (Original) A manufacturing method for an optical data recording medium according to claim 22, wherein the second substrate has one or more recording layers.

37. (Cancelled)

38. (Currently amended) A manufacturing method for an optical data recording medium according to ~~claim 37~~claim 22, further comprising, after said removing of the first substrate ~~or second substrate~~, forming a data-recording layer by forming a reflective film over the ~~groove or lands and pits~~second substrate.

39. (Currently amended) A manufacturing method for an optical data recording medium according to claim 38, further comprising forming a transparent layer on the data recording layer.

40-41. (Cancelled)

42. (Currently amended) A manufacturing method for an optical data recording medium according to claim 22, further comprising, after said curing of the first part of the first radiation curable resin in part, removing all or part of the uncured second part of the first radiation curable resin applied outside of a first radius of the first substrate.

43. (Currently amended) A manufacturing method for an optical data recording medium according to claim 22, wherein said applying of the first radiation curable resin to the side of the first substrate comprises applying the first radiation curable resin is applied to the side of the first substrate by a spin coating method.

44. (Currently amended) A manufacturing method for an optical data recording medium according to claim 43, wherein said applyingcoating of the first radiation curable resin to the side of the first substrate with the radiation curable resin comprises:
closing a center hole of the first substrate with a capping member; and
coating the first radiation curable resin to over the first substrate by dripping the first radiation curable resin from substantially above the center hole while spinning the first substrate centered on the center hole.

45. (Currently amended) A manufacturing method for an optical data recording medium according to ~~claim 26~~claim 22, wherein said applying of the second radiation curable resin to the side of the second radiation curable resin is applied to comprises applying the second radiation curable resin over a recording layer of the second substrate by a spin coating method.

46. (Currently amended) A manufacturing method for an optical data recording medium according to claim 45, wherein said applying~~coating~~ of the second radiation curable resin over the second substrate ~~with the second radiation curable resin~~ comprises:
closing a center hole of the second substrate with a capping member; and
coating the second radiation curable resin over ~~to~~ the second substrate by dripping the second radiation curable resin from substantially above the center hole while spinning the second substrate centered on the center hole.

47. (New) A manufacturing method for an optical data recording medium according to claim 23, wherein said curing of the first part of the second radiation curable resin includes changing the cured state of the second radiation curable resin inside and outside a second radius of the first substrate.

48. (New) A manufacturing method for an optical data recording medium according to claim 47, wherein said curing of the first part of the second radiation curable resin includes exposing only a part of the second radiation curable resin applied over the second substrate to radiation so as to leave the second radiation curable resin applied inside of the second radius of the first substrate uncured.

49. (New) A manufacturing method for an optical data recording medium according to claim 48, wherein the second radius is the same as or larger than the first radius.

50. (New) A manufacturing method for an optical data recording medium according to claim 47, wherein the second radius is 90% or more of a radius of the second substrate.

51. (New) A manufacturing method for an optical data recording medium according to claim 23, wherein said curing of the first part of the first radiation curable resin includes exposing only a part of the first radiation curable resin applied on the first substrate to radiation so as to leave the first radiation curable resin applied outside of the first radius of the first substrate uncured.
